All this can be  
polyfilled  
down to IE11  
(more or less)

# Angular Elements

# Install @angular/elements

```
ng add @angular/elements
```

This also installs polyfills for IE

# Angular Elements

```
@NgModule({  
  imports: [BrowserModule],  
  declarations: [DateComponent],  
  bootstrap: []  
})  
export class AppModule { }
```

# Angular Elements

```
@NgModule({
  imports: [BrowserModule],
  declarations: [DateComponent],
  bootstrap: []
})
export class AppModule {

  constructor(private injector: Injector) {
  }

  ngDoBootstrap() {
    const DateElement = createCustomElement(
      DateComponent, { injector: this.injector });

    customElements.define('date-picker', DateElement);
  }
}
```

# Pros/Cons

- Combining different technologies und versions
- Overhead (Bundle Size)
- „Only“ Components
- Routing difficult
